

SUBNERO HIGH SPEED UNDERWATER MODEM

Communications solution supporting demanding applications

GENERAL AVAILABILITY: 2018
BETA TESTING OPPORTUNITIES: 2017

ENABLING FUTURE APPLICATIONS

Designed to support higher data rates over 100m, Subnero high speed modem enables applications such as wireless real-time low-rate video streaming for ROVs. Other target applications include data muling & underwater wireless networks.

UNDERWATER IoT READY

Designed with ease of integration in mind, our modems provide the fastest way to make underwater nodes internet ready. This enables the deployment of scalable, networked underwater nodes with minimal intervention for data retrieval.

UNETSTACK INTEGRATION

UnetStack provides users with a comprehensive set of APIs and commands for maximizing innovation. This allows rapid prototyping of protocols under various maritime conditions.
